

SYED MAHABOOB JANI BASHA

Mainframe Developer | COBOL | JCL | DB2 | CICS | IMS DB | z/OS

Hyderabad, India | +91 9502065671 | janibashasyed2016@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Mainframe Developer with 5+ years of experience in application development, production support, and incident resolution across the Banking and Insurance industries. Skilled in COBOL, JCL, DB2, IMS DB, VSAM, and CICS on z/OS, with a track record of resolving 50+ production batch job issues per engagement, executing impact analysis and root cause analysis (RCA), and delivering stable, audit-ready solutions in Agile environments. Seeking a Mainframe Developer or Mainframe Production Support role in Banking, Insurance, or Financial Services.

TECHNICAL SKILLS

Platforms	IBM Mainframe, z/OS
Programming Languages	COBOL, JCL, SQL, Easytrieve
Databases	DB2, IMS DB, VSAM
Transaction Processing	CICS
Tools & Utilities	File-AID, Expeditor, SDSF, TSO/ISPF
Testing & QA	Unit Testing, Regression Testing, Integration Testing, Functional Testing
Methodologies	SDLC, Agile, Scrum
Core Competencies	Application Development, Code Enhancement, Impact Analysis, Debugging, Batch Processing, Production Support, Root Cause Analysis (RCA), Incident Management

PROFESSIONAL EXPERIENCE

Technology Analyst — Infosys

Jul 2025 – Aug 2026

Client: Charles Schwab | Domain: Banking / Financial Services | Platform: z/OS, COBOL, JCL, DB2, CICS

Reverse Distribution Mechanism (RDM)

- Supported enhancement and validation of the Reverse Distribution Mechanism (RDM), enabling negative-rate processing through share destruction across a multi-million-account platform.
- Performed impact analysis, functional validation, regression testing, and end-to-end testing across daily, monthly, and yearly business workflows, reducing post-release defects.
- Monitored and supported execution of 50+ production batch jobs daily across HEN and TUP environments, maintaining on-time completion and rapid issue resolution.
- Investigated production issues and job abends, coordinating with cross-functional teams to restore application stability and minimize downtime.
- Assisted in deployment and production migration of negative-rate processing components with zero critical post-deployment incidents.
- Collaborated with business and technical stakeholders to validate requirements, ensuring accurate implementation against specification.

ANEX Project

- Validated conversion of 100,000+ customer account numbers from 8-digit to 9-digit format while preserving full data integrity.
- Configured, executed, and validated daily and monthly batch jobs in the TB region, ensuring accurate account structure migration.
- Performed functional, regression, and integration testing to support implementation of new account structures, reducing rollback risk.
- Coordinated with development and business teams on defect identification, root cause analysis (RCA), and production rollout planning.

Software Engineer — Coforge

Jul 2021 – Jul 2025

Client: Utica National Insurance | Domain: Insurance | Platform: z/OS, COBOL, JCL, DB2, IMS DB, VSAM, CICS

- Designed, developed, enhanced, and maintained mainframe applications using COBOL, JCL, VSAM, IMS DB, DB2, and CICS for end-to-end insurance claim processing.
- Performed impact analysis, code modifications, unit testing, and debugging for batch and online applications, improving release stability.
- Investigated and resolved 100+ production incidents by analyzing abends, batch failures, and data issues using Expeditor, SDSF, File-AID, and TSO/ISPF.
- Developed and modified COBOL programs against business requirements while maintaining coding standards and application stability.
- Retrieved, updated, and validated business-critical data using VSAM, IMS DB, and DB2, supporting accurate claims records.
- Optimized batch job execution and data processing logic, improving application performance and reducing average processing time.
- Processed insurance claims across multiple lines of business through batch and online transactions using internal and external applications.
- Implemented table-driven validations against Entry and Loss databases using fixed and variable tables to ensure accurate claim processing.
- Managed claim workflow activities in UNITECH, including diaries, remarks, record balancing, and statistical validations.
- Collaborated with business analysts, QA teams, and clients to gather requirements, resolve defects, and deliver production-ready solutions.
- Participated in Agile ceremonies including sprint planning, daily stand-ups, defect triage, and release activities.

EDUCATION

B.Tech, Electronics & Communication Engineering

Narasaraopeta Engineering College — 2017 to 2021
